

DECEMBER 2021

AGROS NEWSLETTER 1

Partner Meetings

The two first Partner Meetings took place online, due to COVID-19 restrictions. However, the consortium's experience and positive energy allowed the establishment of a good cooperation climate and the building of a strong partnership. During the Meetings, the partners agreed on the project's deliverables and set all tasks, responsibilities and deadlines. Special attention was given to the development of the 1st Intellectual Output, the AGROS Courses.

The AGROS courses - Intellectual Output No. 1 of the Project

Overview: This deliverable is the core output of the project, and it constitutes the specific output upon which there will be built the whole training activity. The course will support citizens and local communities' members in general by transmitting the right knowledge and inspiration to adopt green roofs to the level it is desirable to them. In this approach, learners will be empowered with their environmental awareness and responses, and they prove to be active members in addressing EU environmental problems.

The development of the course is structured into two main parts: learning contents and digital context. Learning contents include key green roofs related training modules while digital context proposes online platform for virtual learning environment.

What we are up to now: Project partnership has already delivered the training modules and at the stage from transferring learning contents to the digital environment. The AGROS course will propose 9 modules which are rich in a content, illustrations, practical examples:

1. Urban Environment & Sustainable Development
2. Biodiversity Exploitation for Society Prosperity
3. Green Roofs Construction, Environmental-Social-Health-Personal Benefits
4. Taxonomy of Green Roofs due to Climate and Environmental Conditions
5. Green Roofs Implementation Taxonomy (Herbs, Plants, Trees) and Species Optimality
6. Green Roofs in European Cities: Best Practices of "Nature-based Solutions" for Urban Regeneration
7. Horticultural Applications
8. Green Roofs Integration in the Local Community Sustainability
9. Building Elements and Limitations

The e-learning platform covering all these topics will be presented in spring 2022.

Got interested? You can track the progress of the platform development by receiving our newsletters and by following us on facebook!
