## Bus Stops With Green Roofs Can Improve City Wildlife

Many cities, like Bristol or Utrecht are joining little by little to the wide-scale installation of green roofs on its bus stops. Green roofs capture particulates, store rainwater, provide cooling when it's hot and promote urban biodiversity. All of these are beneficial for insects like bees, bumblebees and butterflies. Find out more about the impact of this initiative here: <https://www.greenroofs.com/2022/08/31/bus-stops-with-green-roofs-can-improve-city-wildlife/>
